Allied Telesis™

Centre COM® XS900MX Series

Layer 3 10G Stackable Managed Switches

The XS916MXT and XS916MXS switches offer cost effective, high-speed 10G connectivity for servers and storage, and support 100/1000 connections for existing networks. The XS900MX Series enable a highly flexible and reliable network, which can easily scale to meet increasing traffic demands.

AlliedWare Plus™
OPERATING SYSTEM
Overview

The XS900MX Series are the ideal 10G access switches for enterprise networks or anywhere a relay switch with 10G uplink is required. The switches also make the ideal core or aggregation switch, to connect servers and storage in a small network.

The XS916MXT features 12 x 100/1000/10GBASE-T and 4 x SFP+ slots. The AT-XS916MXS features 4 x 100/1000/10GBASE-T and 12 x SFP+ slots.

Easy management

The XS900MX Series switches feature Allied Telesis Autonomous Management Framework™ (AMF), a sophisticated suite of management tools that provides a simplified approach to network management.

Common tasks are automated or made so simple that the everyday running of a network can be achieved without the need for highly trained, and expensive, network engineers. Powerful features like centralized management, auto-backup, auto-upgrade, auto-provisioning and auto-recovery enable plug-and-play networking and zero-touch management.

Resiliency

Ethernet Protection Switching Ring (EPSRing™) and 10 Gigabit Ethernet allow several XS900MX Series switches to form a protected ring capable of recovery within as little as 50ms. This feature is perfect for high performance and high availability in enterprise networks.

Stackable

Flexi-stacking allows a user to stack two XS900MX Series switches, with the choice of using 10G SFP+ or RJ45 copper connectivity. VCStack provides a highly available system where network resources are spread out across stacked units, reducing the impact if one of the units fails. With VCStack and the XS900MX Series, up to 28 x 10G ports can be provisioned as a single virtual switch in one rack unit.

Enhanced security

A secure network environment is guaranteed, with powerful control over network traffic types, secure management options, and other multi-layered security features built right into the XS900MX Series switches:

- ▶ Tri-Authentication
- ▶ Multiple Dynamic VLAN
- ▶ Enhanced Guest VLAN
- ▶ Auth-fail VLAN
- ▶ Promiscuous/intercept web authentication
- ▶ Two-step web authentication

Advanced security features include:
- ▶ Port security
- ▶ SSH to secure remote access environment
- ▶ DHCP snooping
- ▶ RADIUS/TACACS – User authentication database
- ▶ Encryption and authentication of SNMPv3

Key Features

- ▶ Allied Telesis Autonomous Management Framework™ (AMF) supports auto-recovery, zero-touch configuration, and auto-backup
- ▶ AMF secure mode
- ▶ AMF edge node
- ▶ Ethernet Protection Switching Ring (EPSRing™)
- ▶ RIP and static routing (16 routes)
- ▶ Mixed hardware Virtual Chassis Stacking (VCStack™)—two units
- ▶ Flexi-stacking
- ▶ Compact size: units can be mounted side by side on optional rackmount bracket
- ▶ Extended operating temperature: up to 50°C
- ▶ DHCP relay
- ▶ IPv6 management and forwarding
- ▶ IEEE802.1x/MAC/web authentication support
- ▶ Loop guard prevents network loops
- ▶ Front to back cooling
- ▶ Graphical User Interface (GUI) for easy management

Specifications

Performance

- 40 Gbps of stacking bandwidth
- Supports 9216 byte jumbo frames
- Wirespeed multicasting
- Up to 16K MAC addresses
- 2M Byte Packet Buffer
- 96 MB flash memory
- 4094 configurable VLANs

Power characteristics

- 100-240 VAC, 47-63 Hz

Expandability

- VCStack two units with copper or fiber connectivity

Flexibility and compatibility

- Port speed and duplex configuration can be set manually or by auto-negotiation

Diagnostic tools

- Find-me device locator
- Automatic link flap detection and port shutdown
- Optical Digital Diagnostic Monitoring (DDM)
- Ping polling and TraceRoute for IPv4 and IPv6
- Port mirroring
- UniDirectional Link Detection (UDLD)

IP features

- Black hole routing
- RIP and static routing for IPv4 (16 routes)
- IPv4 and IPv6 dual stack
- Device management over IPv6 networks with SNMPv6, Telnetv6 and SSHv6
- NTP client
- Log to IPv6 hosts with Syslog v6

Management

- Allied Telesis Management Framework (AMF)[1] enables powerful centralized management and zero-touch device installation and recovery
- AMF secure mode increases network security with management traffic encryption, authorization, and monitoring
- Console management port on the front panel for ease of access
- GUI for easy management
- Eco-friendly mode allows ports and LEDs to be disabled to save power
- Industry-standard CLI with context-sensitive help
- Powerful CLI scripting engine
- Comprehensive SNMP MIB support for standards-based device management
- Built-in text editor
- Event-based triggers allow user-defined scripts to be executed upon selected system events
- USB interface allows software release files, configurations and other files to be stored for backup and distribution to other devices

Quality of Service (QoS)

- 8 priority queues with a hierarchy of high priority queues for real time traffic, and mixed scheduling, for each switch port
- Limit bandwidth per port or per traffic class down to 64kbps
- Wirespeed traffic classification with low latency essential for VoIP and real-time streaming media applications
- Policy-based QoS on VLAN, port, MAC and general packet classifiers
- Policy-based storm protection
- Extensive remarking capabilities
- Taildrop for queue congestion control
- Strict priority, weighted round robin or mixed scheduling
- IP precedence and DiffServ marking based on layer 2, 3 and 4 headers

Resiliency features

- Control Plane Prioritization (CPP) ensures the CPU always has sufficient bandwidth to process network control traffic
- Dynamic link failover (host attach)
- EPSRing (Ethernet Protection Switched Rings) with enhanced recovery and SuperLoop Protection (SLP)
- Link aggregation (LACP) on LAN ports
- Loop protection: loop detection and thrash limiting
- PVST+ compatibility mode
- RRP snooping
- Spanning Tree (STP, RSTP, MSTP)
- STP root guard
- VCStack fast failover minimizes network disruption

Security features

- Access Control Lists (ACLs) based on layer 3 and 4 headers
- Auth-fail and guest VLANs
- Authentication, Authorisation and Accounting (AAA)
- Bootloader can be password protected for device security
- BPDU protection
- DHCP snooping, IP source guard and Dynamic ARP Inspection (DAI)
- Dynamic VLAN assignment
- Network Access and Control (NAC) features manage endpoint security
- Port-based learn limits (intrusion detection)
- Private VLANs provide security and port isolation for multiple customers using the same VLAN
- Secure Copy (SCP)
- Strong password security and encryption
- Tri-authentication: MAC-based, web-based and IEEE 802.1x
